Leading Publication in the Meat Packing and Allied Industries Since 1891

Wienie Pak [®] **FF** **FF** FAST FIL

Increases Production Efficiency Always

FF

FASTER FILLING Wienie-Pak Fast Fil permits as much as 40% increase in Wiener and Frank stuffing speeds, boosts production on same stuffer!

FF

INCREASES PRODUCT FLOW TO LINKER Wienie-Pak FF increases linker output by insuring a steady supply of stuffed casing, keeping continuous flow all the way to the smokehouse. Reduces linker shutdowns and stalled lines!

FF

SPEEDS LOW PRESSURE STUFFING Wienie-Pak FF increases production rate by compensating for low pressure stuffing, giving high or continuous production on stuffers with variable pressure!

FF

STUFFS STIFF MEATS FASTER Wienie-Pak FF stuffs stiff meats faster because it will accommodate a larger size stuffing horn! This is especially important for canning wieners and pork sausages.

WIENIE-PAK FF FILLS (Approximately) 40% FASTER

Increase your Frank and Wiener production, profit with Wienie-Pak FF. Get greater production with same man-hours worked on identical stuffers at identical air pressure. With Wienie-Pak FF you cut production time because you can use a larger stuffing horn—

on the *same size casing* and with the *same uniformity*! The next time your TEE-PAK salesman calls, ask him to show you how Wienie-Pak FF can increase your Frank, Wiener and pork sausage production efficiency, boost your firms' profits!

AMERICAN MEAT INSTITUTE

TRANSPARENT PACKAGE CO.

3520 MORGAN ST., CHICAGO 9, ILL.

138 WASHINGTON ST., NEW YORK, N.Y. • 718 TERMINAL BLDG., TORONTO, CANADA

- Wienie-Pak FF is available in sizes from 22 to 27 inclusive—clear and in 4 colors: OT (Orange Tint), OTL (Orange Tint Light), OTD (Orange Tint Dark) and RT (Red Tint).

Machines for SPECIALIZED Sausage-making OPERATIONS

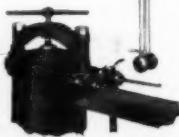

SMOKEMASTER

Generates an abundance of dense, cool smoke. Shortens smoking time. Automatic operation. The most economical smoke generator available.

CASING APPLIER

Saves time ... strips casings on stuffer far faster than by hand.

HEAD CHEESE CUTTER

Cuts long square strips with clean sheer cuts. Improves appearance of head cheese.

PORK FAT CUBER

Pays for itself in labor-savings if you specialize in blood sausage, head cheese, mortadella, bologna, etc.

ROTARY MEAT CUTTER

Excellent machine for reducing large chunks of raw or cooked meat into strips before further processing or canning. Widely used in preparing meat for canning.

Buffalo QUALITY SAUSAGE MACHINERY

for more than 80 years

THIS STAMP CARRIES A QUALITY MESSAGE

Leaders in presenting features that increase efficiency and safeguard quality. Dependable performance with maximum safety and sanitation. A complete line to suit every requirement. Service from coast to coast by factory-trained experts.

**NOW-
Extra Ruggedness
IN THE NEW
U.S. 170-G**

**IT SLICES!
IT SHINGLES!
IT STACKS!
IT GROUPS!**

● In the new U.S. 170-G you get extra built-in operating life through heavy duty construction. Always outstanding because it's the only machine that automatically slices, shingles, stacks and groups, the new 170-G version of this exclusive U.S. machine is designed to fill the needs of the packing house industry.

This is big news for plants that have 8 or 16 hour a day "pre-packaging" operations and have discovered the important labor costs saved by the U.S. Slicer-Grouper. As in earlier models it has precise slice thickness control that can eliminate all except occasional check-weighing on many operations. The U.S. 170-G keeps your packaging costs and your machine investment at a minimum. Write for full profit-making story.

**A CHANGE TO
Kennedy Beef Bags
CAN MEAN BIG SAVINGS
FOR YOU**

With all costs on the rise, every penny saved from packaging-shipping cost is mighty important these days. That's why *Kennedy* Beef Bags are becoming so widely used throughout the meat packing industry.

Made of waxed Kraft paper, *Kennedy* forequarter and hindquarter bags are exceptionally easy to apply. Covered with stockinette, they fit snugly, resist tearing and abrasion . . . and give ample protection during shipment, assuring acceptable condition of the meat on arrival.

Meet Any Packaging Need

The development of special manufacturing techniques now enables *Kennedy* to meet practically any packaging need. For samples and prices of forequarter or hindquarter bags of creped or flat waxed paper, special box or barrel liners of specialized papers, polyethylene or other plastics, write . . .

#150 Boss "H-Control" Hydraulic Grate Dehairer. The hydraulic controlled dehairer with simplified "H" type lever control.

Complete DEHAIRING Control

Mechanical muscles directed by a single "H TYPE" lever, gives the operator complete control of throw in, throw out, cradles at all times.

"H TYPE" shift lever operates in a manner similar to automotive shift

levers. The #150 BOSS "H-Control" Dehairer's smooth, powerful, hydraulic action, responds instantly to operator's touch. Injury to hogs is eliminated by constant "H-CONTROL" and through the flexibility of hydraulic action.

POINTS FOR PURCHASERS

- Heavy steel construction throughout.
- Grate bars—extra heavy, high quality, cast iron.
- Cradles—perfectly formed forged steel, reinforced with welded-in tie rods.
- Scraper shaft turns on self aligning, totally sealed, roller bearings.
- Totally enclosed reducer gears running in oil.
- Hog killing and kindred equipment to go with dehairers.
- Spray pipes with Globe Valve and powerful force spray nozzles.
- Standard 10 H. P. motors.
- 12 standard, 4 point stars, fitted with 4" BOSS belt scrapers.
- Installation supervision by factory service man available.
- Capacity 125 hogs per hour.
- Built by world's foremost Dehairer manufacturer.
- Replacement parts in stock.

HOW TO REDUCE COSTS IN YOUR PORK PROCESSING DEPT.

The best way to reduce costs in your pork processing department, in the face of constantly increasing raw material costs, is to replace worn out, out-dated equipment with modern, efficient machines that take the least amount of attention, increase your out-put per hour and reduce your operating expenses all down the line. Globe engineered pork processing equipment, some of which is shown here, is the result of 36 years of engineering know-how, plus just as many years of actual packing plant manufacturing experience. This equipment is made to perform, to last, to pay for itself many times over in the many years it will serve you faithfully.

Starting at the top is one of many sizes of SCALDING TUBS, made of heavy steel and available in any size or height of frame. Next is a SLICED BACON PACKING TABLE, made for use with a bacon slicing machine, with a 7-inch mesh belt that is exceptionally sturdy and easy to clean. Wide range of styles available. Then you see a BACON CURING BOX, that is available in 625 and 1000 pound capacities. At the bottom is the famous GLOBE HAM MOLD WASHER, a compact, efficient washer for cleaning ham molds and meat loaf retainers, sturdy in construction, efficient in operation.

These are only a few of the machines and other equipment described and shown on pages 366 to 397 in the new GLOBE Catalog in the section devoted to Ham, Bacon, and Pork Processing equipment. We suggest you refer to this catalog and check your needs from GLOBE'S complete line.

Hearings on Controls Law Postponed

The Senate banking committee voted to put off till next Thursday any further meeting on a pending bill to extend the Defense Production Act. Chairman Maybank said the delay in committee action was designed to permit the steel situation to become clarified. Earlier, Maybank had said his committee would continue hearings on new economic controls despite the steel crisis. The group was well along in its work on a new measure.

Meanwhile, there was increasing evidence that some wage and price controls would be ended and that Congress would enact a law providing weaker controls than the present law. It was reported from Washington that the OPS would make its first report on price decontrol when OPS Director Ellis Arnall appeared before the Senate Banking committee to discuss plans for suspending price ceilings and the reporting requirements of regulations. Arnall was to have appeared late this week. When that OPS report is issued, the price agency is expected to take action in suspending price ceilings on certain commodities selling below ceilings, such as hides, wool, certain fats and oils and inedible tallow and greases.

USDA To Purchase Smoked Pork Products

The U.S. Department of Agriculture announced Wednesday that it will purchase substantial quantities of smoked pork products to divert from the market temporary burdensome supplies of pork. The pork products will be distributed later this year to non-profit school lunch programs and other eligible outlets. Products on which offers will be accepted include smoked pork shoulder picnics, hams and bacon. Offers must be submitted not later than 12 noon EST, April 18, 1952, and acceptance will be made by 11:59 p.m., April 28. Non-receipt of acceptance will indicate rejection of the offer. Offers will be considered on the basis of f.o.b. cars or trucks at plants or warehouses. Offers must include a shipping schedule indicating quantities to be delivered during each of the following months: September, October, November, and December, 1952.

Labor Department Rules on Minors in Packing Industry

Secretary Maurice J. Tobin announced this week that, effective May 8, the employment of persons under 18 in specified occupations in or about slaughtering and meat packing and rendering plants will be prohibited. Under the new order—Hazardous Occupations Order No. 10—a majority of jobs in packing plants will remain open to young people between 16 and 17 but most jobs in rendering plants will not. Prohibited occupations are jobs on the killing floor, those involving the recovery of lard and oils, those involving tankage or inedible rendering of dead animals, operating or feeding of certain power-driven meat-processing machines, boning occupations and jobs involving the pushing, dropping, handlifting or hand-carrying of various carcasses or carcass parts. The order does not apply to any department of an establishment which slaughters or processes poultry, rabbits or small game, provided the department is separated from the killing floor.

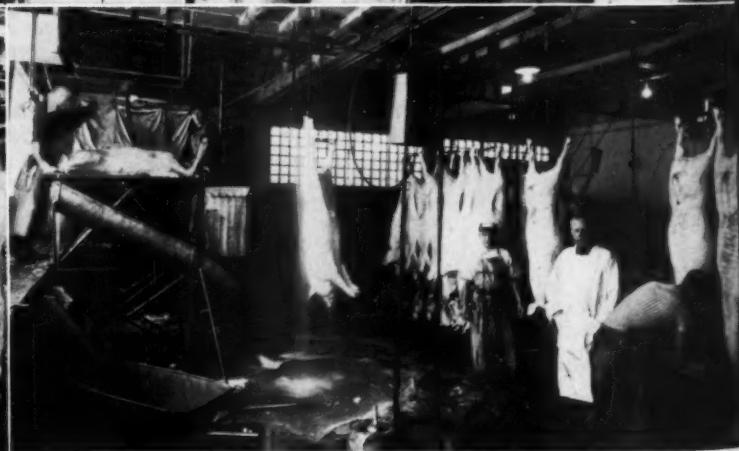

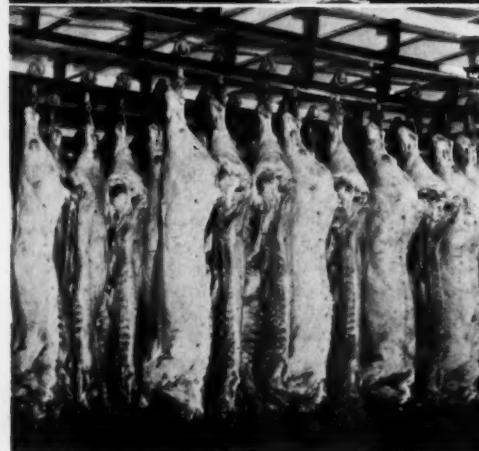

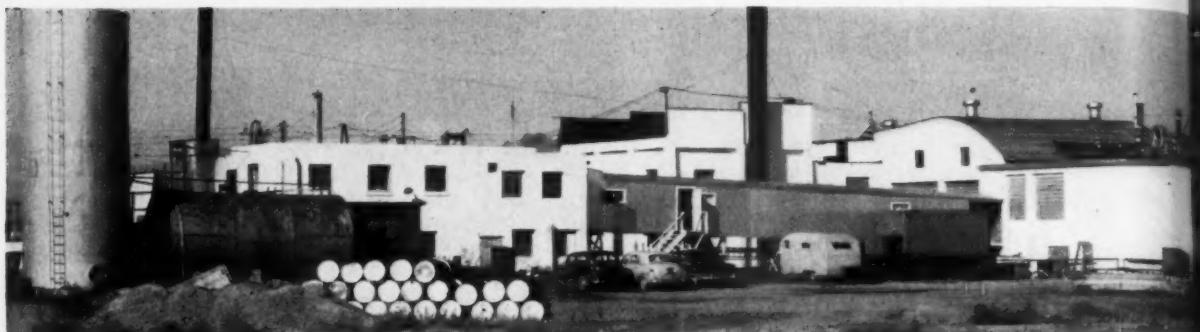

Copies of the order are available on request to the Wage and Hour and Public Contracts Divisions, U. S. Department of Labor.

Monosodium Glutamate in Hamburger, Etc.

In Memo 147, Supplement 2, the Meat Inspection Division explained that either monosodium glutamate or hydrolyzed plant protein may be used in such products as hamburger, chopped beef, cubed steak and steak prepared from meat which has been molded after comminuting processes. Labels for such products as hamburger may reflect the addition of these materials merely by including the added ingredient in the list of ingredients in order of its predominance. Labels for articles such as cubed steaks which do not contain an ingredient statement should indicate the use of the added ingredients by a qualifying statement such as "Monosodium Glutamate Added." The qualifying statement must be featured contiguous to the name of the product with sufficient prominence to assure its being read as a part of the name.

Conference on Strategic Materials

A conference to receive a report on the supply of strategic materials available for use by meat packers will be held in the office of Harry E. Reed, director of the livestock and meat branch, Production and Marketing Administration, USDA, Tuesday, April 15, at 10 a.m. All packers are invited to attend.

Montana Meat Plant Expands Its Operations

A view of the remodeled and expanded plant. The two level rendering building is at the far left and behind the connective ramp is the power plant. Livestock yards and pens are at the rear of the plant.

ALL BUT the squeal," an oft-repeated phrase, describes the efficient utilization of the hog by the meat packing industry. Yet, many laymen who marvel at the efficiency of the packing plant, fail to realize the extent of operations required to provide them with meat.

The modern day packer is much more than just a butcher slaughtering livestock. This is equally true of medium and small size plants as well as the large establishments.

An example of just such a smaller plant is Montana Meat Co., Helena, Mont. In four years of growth the firm has expanded from a butcher shop opened by H. W. Larson to a modern plant containing 35,000 sq. ft. of work area and employing 30 people. Larson, now vice president of the firm which is headed by his son, J. E., started his butcher shop four years after entering this country as a Swedish immigrant. The name he chose for his brand of meat products, "Placer Gold," proved prophetic for he has prospered along with his community.

Montana Meat Co.'s market area describes a circle with Helena as the hub. To assure ready delivery of product to customers within a radius of about 75 miles, the packer maintains a fleet of 18 vehicles. Since 16 trucks must be used each day, fleet maintenance is vital. In 1951 the firm built a large maintenance shop, and, adjacent to this is the garage where vehicles are serviced according to a specific program. The maintenance shop is fully equipped with suitable tools to keep the kill and processing equipment in top condition.

Other recently added service facilities include the boiler and refrigeration rooms. Housed in a separate building are the normal power plant facilities which include a new 200-hp. gas-fired water tube boiler. The old boiler is retained as a standby unit. Three new Frick ice machines were added to take care of the refrigeration needs of the plant's chill coolers, fresh meat coolers and product coolers, numbering eight in all. The largest of these is the 140-head beef sales cooler. The machines will be able to provide additional refrigeration if the plant is expanded or operations modified.

The power plant also houses the packer's water reservoir as the firm pumps its own well water. Water is husbanded carefully. Non-potable waters are piped back to a separate reservoir and used for the inedible rendering operations which are conducted in a separate two-story rendering department.

The rendering department, one of the first of the packer's "new" buildings, constructed in 1938, is reached by a sloping ramp from the kill floor. Two large tallow storage tanks with a total capacity of three carloads are mounted outside the building.

To keep an adequate supply of stock for the 50 head per day beef and 250 head of hog dressing operations, the packer also functions as a feeder. The livestock yards lying parallel to the plant and across an access road cover approximately four acres of land. The packer handles about 500 head of beef animals in the yards and pens. Two hundred head of lamb are being fed at all times.

Another example of the many activities of this plant is the salvaging of glands for pharmaceutical use. Montana Meat now saves cattle, hog and sheep pancreas glands and beef bile. It soon will start saving adrenal glands from both hogs and cattle.

To all of these dexterous and non-butcher operations Montana Meat plans to add another, namely prepackaged meats. K. W. Anderson, sales manager, said that prepackaged meats will extend the area of the packer's distribution and increase the service provided its customers.

PHOTOS ON OPPOSITE PAGE include: View of sausage department in its sanitary setting; pork cutting operation; beef sales cooler, and view of the dressing operation. In front of company truck are staff members: W. D. Hambridge, secretary; Henry Smith, head butcher; K. W. Anderson, sales manager; J. E. Larson, president, and H. W. Larson, vice president.

AMI Blasts Price Controls; Says They Reduce Meat Supply

Two members of the board of the American Meat Institute spoke out against price controls before large audiences this week.

Price controls punish the law-abiding, reward the law-breakers and hurt consumers, H. H. Corey, board chairman, said at a luncheon honoring Institute board members visiting the San Antonio area. The luncheon was under auspices of the San Antonio Chamber of Commerce.

Later in the week, at a luncheon for AMI directors given by the Fort Worth Chamber of Commerce and the Farm and Ranch Club, F. W. Specht, president of Armour and Company, asserted that although most meat prices have been below ceilings for five or six months, even the threat of price controls is reducing America's meat supply. "Like any other business man, the livestock producer retrenches in the face of uncertainty," Specht said.

Pointing out that our population is increasing at the rate of 7,000 a day, Specht said that our meat supply can probably keep up with the rise in population "if the American farmers are helped instead of hindered. We have already mortgaged the future of our grandchildren in terms of the government debt they will have to pay. Are we also going to doom them to a vegetarian diet?" he asked.

Said Corey, who is president of Geo. A. Hormel & Co., Austin, Minn.: "It is bad for America to set up a situation with a man-made law which, when demand exceeds supply, works out to punish the law-abiders who lose the business and to reward the law-breakers by handing the business over to them. Government price controls fail to control prices and bring about unsanitary and wasteful processing. Even worse is the effect on the moral structure.

"Price controls not only penalize the law-abiding and reward the lawless, they have gravely injured the public. The public's meat supply in 1951 was 7 per cent lower than it would have been if controls had not been imposed. Obviously, meat prices actually would have been considerably lower if production had been permitted to expand instead of being forced to contract."

AMI directors visited Fort Worth in recognition of the fiftieth anniversary of the founding of the Fort Worth Stockyards.

Kentucky Places Embargo On Livestock Shipments

The state of Kentucky has placed an embargo on shipments of cattle, calves and hogs from Ohio, Illinois, Michigan, Indiana and West Virginia because of reported outbreaks of anthrax. Several states, including Ohio, Indiana and Illinois had previously forbidden the entry or use of imported (foreign) bone meal or feeds containing bone meal.

ANOTHER milestone has been reached in the canning industry. Just as some 35 years ago the sanitary can freed the industry from the laborious capper and venting operations, today a modern pear-shape sanitary can eliminates the solder float and the doughnut ring in ham canning.

Developed by the research and mechanical divisions of Continental Can Co., the new can and its supplementing closing machine have undergone extensive production tests at Armour and Company's canning kitchens. However, Continental officials pay tribute to I. N. Jordan, canned meats production control, Armour, whose faith in the practicality of the new idea frequently spurred them on when mechanical difficulties in building the vacuum closing machine seemed insurmountable.

• • •

Armour officials point out that one of the major features of the new can is its attractive appearance. There is none of the conventional leading of the entire rimmed area. The bright shining appearance of the can will add an element of sales appeal. For those consumers who do not use the rip strip, the new can allows easier opening with conventional can openers.

Armour has the lid of the can lithographed with an attractive platter design. Since the perishable canned hams are at times subject to a dew point condensation, it is felt the lithographing may enhance the durability of smart can appearance.

In the lower photo, examining one of the new sanitary cans are W. F. Coleman, assistant sales manager, Chicago district office, Continental Can Company; I. N. Jordan, Armour and Company, and O. C. Johnson, chief, meat products section, consumer research for Continental Can.

Original experimental work on the new pear shaped can vacuum closing machine began in 1935 when its feasibility and possibilities were discussed by Continental and Armour officials. In 1944 sufficient knowledge had been accumulated through tests to warrant the start of actual can and closing machinery designing, according to Wilson B. Larkin, mid-western general line sales manager for Continental.

Many were the heartaches experienced in the trial and error adjustments made on the basis of actual production runs at Armour's Chicago plant. The problems of proper sealing compounds, correct flange design and, most importantly, of the vacuum closing machine, had to be settled step by step. Finally, late last year the semi-automatic single operation vacuum closing machine was designed and manufactured by the Cameron Division of Continental Can Co.

Installed first at Armour's Kansas City plant, the new

sanitary style pear shaped ham can was subjected to intensive production, stability and shipping tests. The tests were under the supervision of B. M. Shinn for Armour and O. C. Johnson for Continental. Thirty thousand of the new medium-based pear-shaped cans were processed and the subject to an 80-day incubation test. Parts of this lot were further broken down and subjected to additional shipping and handling tests.

Finally, from the whole lot 24 cans were rejected as unsatisfactory. However, only one of these could be considered as either a closing machine or can failure. Roughly about one can per thousand is a failure allowance expected with the solder sealing method.

The 23 failures were attributable to operational procedures, since modified as Armour has gained more knowledge with actual production. Five cases of six cans each from this lot were subject to Quinn Laboratory test which simulates actual handling conditions equivalent to 3,000 miles of rail travel. None of the cans in this lot developed leakers.

Armour's early production runs indicated two critical factors in the handling of the new cans. First, if placed on the face of the ham, the type of gelatine used has a material bearing on the number of cans rejected at the inspection point. Armour originally placed a flake type gelatine on its hams prior to sealing. It has since been established that part of this gelatine found its way onto the flange of the can and prevented air tight sealing. Since Armour shifted to a granulated type of gelatine, this trouble has been completely eliminated.

• • •

The second critical factor is can handling. Banged flanges did not make too much difference

in solder-sealed cans as the dents were leaded. In the new can perfect flanges are essential for proper sealing. The can must be handled carefully all the way from the can factory to the closing machine.

The operation of the new semi-automatic vacuum closing machine was observed by a NATIONAL PROVISIONER staff member at Armour's Chicago canning department. Once the ham is placed in the can and pressed, and the correct amount of gelatine added, the can travels on a web wire conveyor to the vacuum closing machine. The operator places the can lid in the shelf-type slot and the can on its base plate. He then closes the door of the machine. This action starts the vacuumizing and seaming cycle. The door is equipped with a gasket and, as the machine pulls a vacuum before and during its seaming cycle, it holds the door in position. Once the cycle is completed the vacuum is broken and the door opens readily. The closed can is then placed on a conveyor which carries it past the inspection

Why some trucks HAUL AT LOWER COSTS

The main reason some trucks will cost less to operate is that they fit the job better. In fact, that's exactly why you can haul meat at such low over-all expense with Dodge "Job-Rated" trucks.

There's a Dodge truck that's engineered at the factory for top economy in your business.

You can be sure of the *right* engine and the *right* chassis for high performance on a low budget. You can be sure of longer life and lower upkeep. That's because you will enjoy such outstanding advantages as 4-ring aluminum pistons with chrome-plated top ring; exhaust valve seat inserts; hypoid rear axle on many models;

improved weight distribution; and many other time-proved Dodge dependability values.

On top of that, you can enjoy the economies of the easiest handling, smoothest riding, safest driving truck in the business. Dodge trucks deliver these benefits because they have short turning diameters—extra-long, resilient springs—big brakes with Cyclebond lining on all except air brake models.

But don't take our word for it alone. Judge Dodge performance and value for yourself. See your nearby Dodge dealer for a demonstration. Get proof on how and why Dodge "Job-Rated" trucks are the trucks that are engineered to haul more at lower cost.

BROKERS WANTED

station and on to the cook vats. The upper photo demonstrates how easily the machine is operated.

This single machine-closing and vacuum-pulling operation streamlines the pear-shaped can closing operation. Only one operator is required to close a sanitary can, whereas formerly four operators were needed.

The machine vacuum-closes approximately 300 cans per hour. The machine can handle either a medium or small base with a small changeover. However, with either base it can handle any can height.

Amend CPR 74 on Pork

OPS released on Friday a huge omnibus amendment to the wholesale pork ceiling. Amendment 2 to CPR 74, revised, becomes effective April 16. Some of the changes are as follows: 1) Filing date on dried pork and specialty pork items is extended. Sales of prefabricated retail cuts to retailers and purveyors of meals is permitted where they normally bought in this form. 2) Invoiced numbering and carrying requirements are modified. 3) Brokerage provision similar to other meat regulations is added, amounting to 17½¢ cwt. on all but denominator hogs. 4) Establishment of a ceiling price for miscuts is clarified so that it will not be an excuse for cutting violations. 5) Prices are established for split, skinless, boneless and fatted hams if each split in fresh or frozen, cure or smoked state weighs 2 lbs. or more; in ready-to-eat or cooked state, 1½ lbs. or more. 6) Limitation on sale of "bellies, square cut and seedless with sparerib in," is deleted. 7) Center cut loin, shoulder end of loin, ham end of loin and regular loins with skin on are added to Schedule 1. 8) Prices established for shoulders, skin, neckbone in, fresh or frozen, cured or smoked. 9) Country backbones are added to Schedule 5; cappicola butts are re-defined and re-priced and the \$1 per cwt. curing allowance for certain cuts is extended to include tidbits from hind feet and No. 1 skin strips. 10) Changes are made in allowances for parcel post and express shippers and peddler truck additions are adjusted. 11) Wrapping in vacuum-sealed shrinkable plastic material is given \$1 per cwt. allowance over other wrapping allowances.

Other changes include a re-definition of "pork, returnable containers, regular plates, hotel sliced bacon, blade meat, pork tenderloins and cooking in molds."

Financial Notes

International Packers, Ltd., has declared a dividend of 30¢ on the common, payable May 1 to stockholders of record April 15.

Tobin Packing Co. has declared quarterly dividends of 15¢ on \$3 par common stock and \$1.75 on 7 per cent preferred, payable April 1 to holders of record March 14.

Canned Meat Output Up 38% in Two Years

An increase of 38 per cent in the production of canned meat in the last two years was reported this week by C. L. Nelson, manager of the canned meat department of Libby, McNeill & Libby, and president of the National Meat Canners Association.

Approximately 1,000,000,000 lbs. of canned meats were produced in 1948. In 1951 that figure increased to nearly 1,500,000,000 lbs. At the present time, canned meat production represents slightly in excess of 10 per cent of total federally inspected production of meats. Nelson stated that, in his opinion, improved quality has been a dominant factor in canned meat sales increases. Furthermore, extensive advertising and promotion by the industry and by individual brand manufacturers has acquainted millions of housewives with the merits of canned meats.

"The industry's promotion of canned meats in June of this year will be the largest ever undertaken," Nelson said. "It will be built around the canned meat advertising of the American Meat Institute and will include supporting advertising and promotion from can manufacturing companies, steel companies, and other trade associations interested in the meat industry and in canned foods."

Proposed Renegotiation Rules for Agents Drawn

Proposed regulations have been issued by the Renegotiation Board in two fields: 1) rules governing the renegotiation of sales representatives who handle defense contracts, and 2) a regulation concerning the exclusion from renegotiation of profits realized from increases in value of inventories of raw and semiprocessed materials which are in excess of the amount required to fill existing contracts.

Under a major provision of the first proposal, brokers, manufacturers' agents and dealers who provide outstanding services to the defense effort would be allowed to keep a larger share of their profits when they are renegotiated than those who merely pass orders on to the manufacturers.

Sioux City Stock Embargo

Due to emergency conditions resulting from threatening flood waters of the Missouri river, the Sioux City Stock Yards Co. declared an embargo on all incoming livestock, effective at 1 p.m. Thursday.

With the river at 18 ft. above normal, and expected to reach a crest of about 22 ft. by about April 15, all commission men, order buyers and others were instructed to have all their livestock disposed of by no later than yesterday.

The National Guard was called out to help cope with the situation.

Are You Spending Too Much for Insurance?

Here are some ideas for improving coverage and reducing premium costs

DURING the past twenty years, insurance has become so complex that many large corporations have hired insurance managers to see that they secure the best protection for the lowest cost. Average meat packing plants cannot afford to hire a full-time insurance expert, but they can improve their insurance program and, at the same time, reduce their premiums by applying the following rules:

Common Expiration Dates: To a businessman, time is one of his most valuable assets, and any saving of that commodity is worth dollars and cents to the business. An insurance program planned so that all renewals fall on a common expiration date will save time and greatly eliminate the possibility of omission or duplication of coverage. This need not cause financial hardship, for many banks will finance insurance premiums over long periods of time at very low rates of interest without reducing the extension of credit for regular business purposes.

Consolidation of Coverage: Placing insurance coverage in as few policies as possible will serve as a further check against omission or any duplication. Consolidation in many cases will also eliminate the payment of several minimum premiums and quite often will make a risk, not otherwise qualified, eligible for experience rating. Experience rating is what the name implies; risks that have a good experience are allowed percentage reductions in policy premiums.

Term Credits: Most insurance policies can be written for terms of three or five years at reduced rates, and if meat plants take advantage of this rule they can effect savings up to and including one full year's premium. In addition to this basic saving, they also have the advantage during the whole three or five-year term of the premium that was applicable when the policy was written. Nowadays the tendency of insurance premiums is upwards, like the cost-of-living spiral, and it is good business to secure a lower rate for as long a term as possible. It is not necessary to pay the full premium in ad-

vance, for most insurance companies have instalment payment plans or annual premium payment plans.

Self-Insurance: Most businessmen self-insure some of their business risks, for the cost of complete protection is too high for the average budget, and often the individual exposure is not worth the premium it would cost. In planning which exposures to self-insure, the only ones that should be considered are those that could not cause a catastrophic loss. Two items that could be self-insured are plate glass, and collision coverage on older automobiles or commercial vehicles.

Package Policies: Many companies have policies designed for particular types of businesses. These usually provide more coverage for less money than similar coverage purchased separately in standard contracts. An example is the almost all-risk floater policy on livestock offered by most inland marine writing insurance companies. In many cases the cost of fire insurance alone would be more than they ask for the broader coverage floater policy.

Reporting Policies: If a firm carries a large amount of stock and the values are not constant, a monthly reporting or "provisional" fire policy may be the answer to the need for proper coverage at less cost. Under this form, a deposit premium is paid when the policy is written, and at the end of the term the earned premium is adjusted on the basis of the reports submitted each month listing the actual values of stock on hand.

Dividend Policies: Many insurance companies pay dividends on policies at the end of the policy term. Coverage is accepted only on "preferred risks." Packers would have to meet their requirements for a "preferred risk" in order to be eligible for insurance in these companies. Their dividend payments are not necessarily dependent on a firm's good experience, but rather

upon the overall experience of the company itself. These dividends usually average 15 per cent of the policy premium, but they may run larger or smaller.

Deductibles: If plants are primarily interested in insuring against large losses rather than covering small "nuisance" claims, they may save money through the use of deductibles. Deductibles are commonly written in connection with automobile collision where you pay the first \$50, \$100 or \$250 of the damage to your car, and the insurance company pays the balance. It is also possible to place burglary insurance or property damage liability on a deductible basis at a substantial saving. For example, automobile property damage liability may be written on a deductible basis where there is a fleet of five or more cars; there is a discount of 30 per cent for \$50 deductible. Regardless of the deductible the insuring company will adjust all claims, saving packing companies this bother.

Fleet Rating: In writing insurance for private passenger automobiles or commercial vehicles, the possibility of fleet rating is often overlooked. Where there are five or more vehicles under one ownership, and they are used principally in business, a reduced fleet rate for fire, theft, comprehensive or collision coverage may be secured. Qualifying for a fleet rate can save a business many dollars annually, as the discounts for fleets are sizable. There is also the advantage of automatic coverage on newly-acquired vehicles without the necessity of reporting their purchase to the company until the end of the policy term.

Insuring Correct Values: Insurance agents and brokers say that one of the most common, and most costly, of all errors is the over-insuring of motor vehicle values. Inconsistent as it may seem, the man who neglects to increase his fire insurance in line with rising

(Continued on page 23)

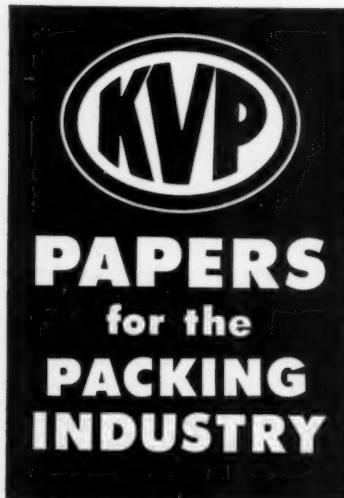

BASIC DISCOVERIES THAT PACED PROGRESS

$I = \frac{E}{R}$

George Simon Ohm gave us the basic electrical formula, or "Ohm's Law." The current, I , flowing through a conductor is equal to the electromotive force, E , divided by the resistance, R .

One of countless applications of Ohm's Law is found in the electric toaster, where heat is built up by increasing resistance to the current.

PROTECTING THE FLAVOR and cleanliness of meat products from packing house to consumer is one problem. Making them more attractive, more appealing to buyers is another. The discovery that properly engineered paper solves both problems has contributed substantially to successful meat merchandising.

For 42 years KVP has specialized in producing meat protective papers . . . and adding colorful design that stimulates sales, wherever there is an opportunity to increase sales-effectiveness. Complete information on request.

THE MEAT TRAIL

PERSONALITIES

and Events

OF THE WEEK.

►R. D. Arney has been appointed general sales manager of the Flavor-Sealed division of Geo. A. Hormel & Co., Austin, Minn. He had been product manager for both gelatin and shortening and is continuing in that capacity as well as in that of general sales manager.

►Dr. Henry R. Kraybill, director of scientific research for the American Meat Institute Foundation, has been appointed a professorial lecturer in the department of food engineering at Illinois Institute of Technology, according to Ralph G. Owens, vice president and dean of engineering. Dr. Kraybill will lecture in food technology. He received a doctor's degree in plant biochemistry in 1917 from the University of Chicago. He is also a lecturer in biochemistry at the University. From 1917 to 1919 Dr. Kraybill served as assistant physiologist for the bureau of plant industry of the Department of Agriculture and from 1926 to 1941 was professor of agricultural chemistry and head of the department at Purdue University. He has been with the AMIF since 1941.

►Gabriel H. Schoen, president of Schoen Brothers, Inc., Atlanta, Ga.,

DR. KRAYBILL

and of POM Chemical Industries, Inc., died March 20. He was 50 years of age. He had been president of Schoen Brothers for the past 20 years.

►On April 1 Colonial Beef Co., Philadelphia opened an additional plant for the exclusive production of "Ready-cut" portion-control meats under U. S. government inspection. In making the announcement, Louis E. Waxman, Colonial president, stated that the new 15,000 sq. ft. plant will reflect the more than three years of pioneering of products, equipment and methods in the field of ready-cut meats. High speed slicers, electric saws, conveyor systems and other special equipment will class the plant as one of the most modern and highly mechanized operations in the world. Initial weekly production is geared for 250,000 units with provisions for doubling and trebling this figure as the need arises. Colonial Beef Co. has also instituted a special department for those interested in handling Colonial products, under their own private labels.

►W. E. Gelinsky, president, Western Packing Co., Beaverton, Ore., has sold his lease and equipment to Lewis Bros., 438 S.W. First ave. Gelinsky plans to build a small plant on his country place for processing ham, bacon and other pork products.

►Harry S. Thompson, who has been in charge of the New York office of Canada Packers Limited for a number of years, is retiring. He has been in the meat packing industry 52 years. Thompson plans to return to Canada and raise strawberries on his Valley View Farm at St. Jovita.

►V. B. Henry, 44, divisional superintendent, Swift & Company glue and gelatin plant at Harrison, N. J., was killed in an automobile collision with

AMONG THE MANY packers who attended the liquidation sale at the former plant of the Cudahy Packing Co. in Kansas City were (left and center) Paul Bryson, Louisville Provision Co., Louisville, Ky., and Harry Delaney, Geo. A. Hormel & Co., Fremont, Neb. With them is Samuel Barlant of Barlant & Co., Chicago, joint liquidator with Phil Hantover, Inc., Kansas City.

a freight train at a grade crossing. Henry had joined Swift in 1929 as a graduate chemist at the Chicago plant.

►R. G. Plager, director, agricultural service department, John Morrell & Co., spoke before the annual meeting of the Iowa Swine Producers Association on the subject, "Producer and Packer Responsibility in the Swine Industry."

►A recent Sunday issue of *The El Paso (Tex.) Times* which described the leading industries of the "Fabulous Southwest," included several pictures taken in the plant of the Peyton Packing Co. to illustrate the caption, "From Steers to Steaks." The four "C's" that form the foundation for the economic structure of the Southwest were listed as Cattle, Cotton, Copper and Climate.

►Geo. A. Hormel & Co., Austin, Minn., has established a sub-branch operation at Jackson, Miss. Jim Louve, formerly a salesman at New Orleans, will head the Jackson unit, which is under the main branch at New Orleans.

►Anthony S. Baranowski, 62, who operated the Quality Sausage Co., Milwaukee, for 25 years, died recently. He had retired about four years ago.

►Negotiations for a wage increase between members of the Butchers' Union, Kern County Local 193 and representatives of the Kern Valley Packing Co., Piute Packing Co. and the newly formed Vernon Meat and Provision Co.,

ANSWERING THE CALL of the Philadelphia Allied Jewish Appeal are these leaders in the wholesale meat and meat packing industry of the city: l. to r., Al Breslow, Herman Silver, Nathan Rosenberg, Paul J. Batt and Joseph Balack. The 1952 campaign got underway on April 7.

Bakersfield, Cal., are reported to be at a standstill. Negotiations, for hours and wages only, between the local and the combined Kern Valley and Piute companies started 60 days ago. The employees are asking a total of 28¢ an hour wage increase for a 40-hour week; management has offered 15½¢. As negotiations were broken off, the union members unanimously recorded a strike vote.

►Swift & Company has obtained a city permit to erect a one-story, insulated steel office, 50 x 80 ft., in Harrisburg, Pa., immediately north of its present plant, and an adjoining truck service building. Its present office and truck service building will soon be demolished to make way for a wider highway.

►Bruce Werts Co., St. Petersburg, Fla., supplier of meats to local restaurants, has opened a new and larger location at 943 Baum ave.

►L. T. Force, formerly superintendent of the Winnipeg, Canada, plant of Canada Packers Limited, has been appointed assistant to the general superintendent of Canada Packers Limited.

►A. C. Hadden has been appointed to succeed W. A. Durrer, who retired as superintendent of the Oakland, Cal., processing branch of John Morrell & Co. Hadden had worked in the meat packing industry about 20 years before joining the Morrell firm in 1945 as assistant foreman of the smoked meat department at the Topeka, Kan. plant. He was advanced to foreman, then curving department foreman and a divisional superintendent. When the Topeka plant was closed he was transferred to the Oakland branch as assistant superintendent. Durrer had been with Morrell since 1935.

►M. O. Cullen, head of the department of meat merchandising, National Live Stock and Meat Board, was a featured speaker on the program of the fifth annual Market Hog Show of North Dakota State College. He gave a pork cutting demonstration and told about the Board's meat program.

►Fred Hahne, publisher and founder of the *Aberdeen-Angus Journal*, died recently after a lingering illness. He was 75 years old.

►Joe Paull, wholesale meat dealer in Philadelphia operating under his own name, was honored with a testimonial dinner by the Newcomers' Club of Philadelphia on April 5. Paull is honorary president of this club which is made up of European refugees. He was feted for his work in assisting many refugees in getting work, shelter, medical care and support and in bringing a number of families to the United States.

►Thieves got their hands on the safe and then got scared away at the Philadelphia Dressed Beef Co. in that city recently. Horace Bailey, watchman, was making his rounds just before midnight when a man suddenly appeared in front of him. The man, who had a gun in his hand, ordered Bailey to be quiet and go with him into the main office. There the gunman ordered Bailey

to lie down, and another man came in and helped tie Bailey's hands and feet. Bailey heard them go down the hall to a rear room and come back with a hand truck. They loaded the office safe on the truck and started to push it out. But just as they reached the corridor there was a noise at the rear of the first floor. It was James Saddler, a cleaner, reporting for work. Frightened, the thieves ran out the front door, leaving the safe safely behind.

►Cecil Smith, who had 22 years experience in the meat packing industry before he joined

The Dupp Co., Germantown, O. several years ago, has been assigned to represent the company in a five-state area surrounding St. Louis proper. He is currently making his home and his headquarters in St. Louis. Smith started in the packing industry in 1930 at the E. St. Louis

plant of Swift & Company. After 14 years during which time he worked in various departments and participated in their training course, he spent some time with the Hygrade Foods Products Corporation. Later he was plant superintendent for the John Wenzel Packing Co., Wheeling, W. Va., and held the same job at several Mexican plants, including Empacadero de Tampico and Empacadero de Chihuahua. Immediately before joining Dupp, Smith was killing superintendent for the Earl C. Gibbs Co., Cleveland.

►Fire of unknown origin in the two-story concrete block and stucco building at Reading, Pa., occupied by the Montrose Abattoir, caused considerable damage to plant and equipment. Firemen were hampered in fighting the flames by lack of water.

►Louis H. Solomon, general counsel for the Provision Merchants Trade Council, and chairman of the Provision and Kosher Meat Industries Division of the United Jewish Appeal of Greater New York since the industries first organized an annual drive for overseas Jewish relief, has accepted the chairmanship of the division for 1952, his sixth consecutive term.

►The Medina Packing Co., which operates a plant at Litchfield, O., has announced that it has opened a new plant at Painesville, O., to serve all the eastern area of Cleveland and the eastern suburbs.

►The Sycamore Market, Hayward, Cal., has just completed a small plant for processing frozen meats. It operates under state inspection.

►Menu Meats, Inc., Fort Wayne, Ind., has filed articles of incorporation to permit it to slaughter meat animals and operate butcher shops. Incorporators are Ralph Johnson, Dale Rollins, Beatrice Jenkinson and John E. Wil-

liams, 343 Field st., Fort Wayne.

►John T. La Forge, manager, John T. La Forge & Sons, Freeport, Ill., and formerly president of the National Renderers Association, died early this week as the result of an automobile accident near Moline, Ill.

►Essex Packers, Hamilton, Ont., Canada, employed a full-page newspaper ad to thank its business friends for their "patience and willing cooperation" following the company's fire.

Kansas Plant Starts Expansion

The Coffeyville (Kans.) Packing Co., a subsidiary of Stahl-Meyer, Inc., New York, has a \$150,000 expansion program underway, J. L. Simmons, company vice president and plant manager, said recently. Two buildings are under construction. The main structure, a single story building, 50 by 70 ft., will serve as a boiler room for inedible rendering and as a garage. The second building will be used for manufacturing fertilizer. Both buildings will be of concrete block and topped with insulated steel deck roofs. Present capacity of the plant, 100 head of cattle a day, will be increased to 150 a day when the expansion is completed. The plant, originally opened in 1941 as the Castle Packing Co., was bought from A. L. Morris in September 1947 by Stahl-Meyer. Its name was changed from the Morris Packing Co. to the Coffeyville Packing Company.

Kay Brand Packing Co. Sold

All the outstanding common stock of the former Kay Brand Packing Co., Findlay, O., was bought by Henry L. Schwartz, according to an announcement by Robert M. Schwartz, attorney for the purchaser. Purchase of the common stock was made from Joseph Kirchner, president of Kay Brand, at an undisclosed price. Control of the company passed to Schwartz with acquisition of the stock. Schwartz took over operation of the plant and changed the name to Schwartz Packing Co. The company will continue to operate a general meat packing business.

For the present, Schwartz will serve as president and treasurer. He had been meat price analyst for the Toledo district office of OPS. From 1940 to 1947 he operated his own food market, and for ten years previous was meat manager for the Kroger Grocery & Baking Co. in Toledo. The attorney, Schwartz, who is no relation to the purchaser, will act as secretary.

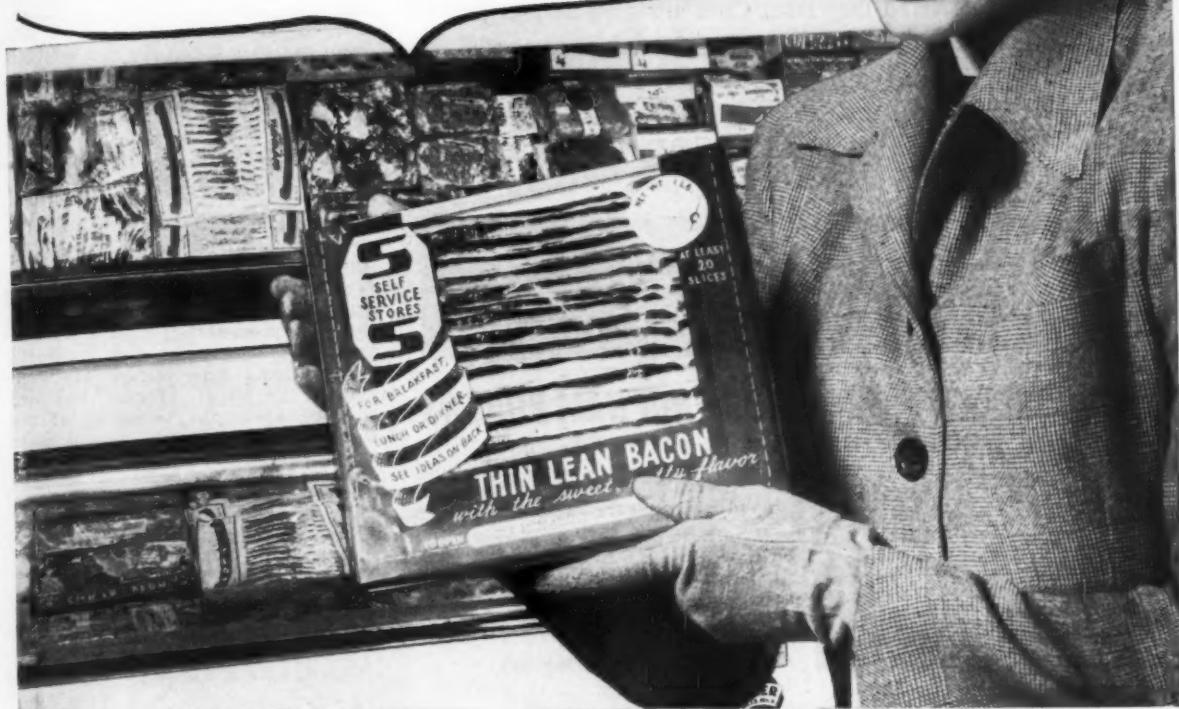

Horsemeat Packers Organize

Richard L. Davis, vice president of the Hill Packing Co., Topeka, Kans., has been elected president of the Horsemeat Packers and Canners Association at its recent organizational meeting in Omaha. According to a spokesman, the organization, which includes representatives from most of the large horsemeat processing companies in the nation, was formed principally to attempt an interpretation of new OPS regulations for the industry.

CECIL SMITH

Does your product sell itself in self-service meat departments?

More and more progressive retailers are putting their meat departments on a self-service basis. Now meat has joined the ranks of food items that must be equipped to sell themselves.

This is a challenge to meat packers to make the most of this trend. Are your packages designed for self-service? Colorfully printed Cellophane pack-

ages attract attention, put an appetizing picture in the shopper's mind . . . make impulse sales.

Your Du Pont representative and the converters of Cellophane will be glad to work with you in developing packages for self-service marketing. E. I. du Pont de Nemours & Co. (Inc.), Film Dept., Wilmington 98, Del.

Cattlemen Want to Ship Live Cattle to U.S.

Mexico will be able to resume exports of cattle to the United States at the rate of 500,000 head annually, when the quarantine is lifted in September, according to Arturo H. Orfi, head of Mexico's National Federation of Cattlemen. He said this would bring into the country approximately \$25,000,000. Orfi said his organization will fight for the right to export live cattle across the border because this would bring the best remuneration.

It is believed, however, there is a growing movement to prohibit livestock on hoof going to the United States as a means of protecting the Mexican leather and tanning industry. So while cattlemen would like to ship the livestock on hoof to obtain higher prices, this is opposed by the tanning industry and by Mexican meat packers who point out that they have heavy investments in equipment and that their needs should be considered first to avoid any possibility of meat scarcities in Mexico. To settle the controversy it appears that government officials are considering the "quotas" idea in permitting meat exports.

Meanwhile the hoof-and-mouth disease question itself remains unsettled. There have been rumors of new outbreaks in Masantla, in the state of Veracruz, but the government and the cattlemen's organization have stamped these as false. It is even suggested that this and other rumors are being planted by meat packers who are troubled about the reopening of the border for fear it would mean a great curtailment in supplies of livestock coming to their plants.

More Vitamin B₁₂ Found In Eggs and Meat

Eggs and meat are better sources of Vitamin B₁₂ than previously supposed, according to a recent report of U. S. Department of Agriculture research scientists to the American Institute of Nutrition meeting in New York City. Presence of the extra B₁₂, the vitamin that specifically combats pernicious anemia, was detected by a new method of extracting it from these two food products.

The report was based on experiments conducted by the department's Bureau of Animal Industry. It was found that through the use of cyanide in extracting B₁₂, nutritionists will be able to estimate more accurately the quantities of the vitamin in food materials and to establish more definitely requirements for animals and men.

Refrigerated Storage

New Trade Practice Rules for the Public Refrigerated Storage Industry have been announced by the Federal Trade Commission. Copies may be secured from D. C. Daniel, Secretary, Federal Trade Commission, Washington, 25, D. C.

Swift Puts New Type of Dry Dog Food on Market

Unsurpassed flavor, nutritional qualities and economy are claimed by Swift & Company for its new meal-type dog food, Pard Meal, which is now going into volume production. The product not only contains all the essential elements of a balanced diet, according to C. M. Olson, head of Swift's Pard department, but it is "so palatable and delicious to dogs that we plan to make the theme of our advertising program 'Flavor He Can't Resist'."

In addition to guaranteeing a higher protein content, Pard Meal also has a high meat fat content—25 per cent more than any other leading brand of dry dog food, according to Swift. The factor which permits the higher fat content—gum guaiac—also makes possible considerably longer keeping quality of the new product. Pard Meal also contains chlorophyll.

A new type packaging, keeping the contents sift-proof and infestation-proof, assures long shelf life of the product in the store. A special ingredient also assures long keeping quality even after the package is opened.

As a get-acquainted offer, Swift will refund 15c on the 2-lb. carton and 25c on the 5-lb. carton if the buyer mails in the coupon on the carton top. The offer holds good throughout the rest of 1952. Swift is also offering to refund the full purchase price if, at the end of a week's trial feeding, the dog doesn't prefer the product to any other meal-type food he has ever eaten.

Oil Chemists' Meeting

On April 28 the forty-third annual meeting of the American Oil Chemists' Society will open in Houston, Tex., at the Shramrock hotel. Attendance is expected to reach 400 or more. A total of 45 technical papers will be presented, some of which will be of interest to packers, such as "The Isolation of Monoglycerides from Lard and from Bread" by N. H. Kuhrt and E. A. Welch, Distillation Products Industries, Rochester, N. Y. Research at the same institution is the basis for another paper to be given, "The Presence of Monoglycerides in Partially Digested Fats."

The AOCS has announced the dates of its fall meeting, October 20 to 22 in Cincinnati. Another event on the Society's calendar in 1952 will be the short course on soaps and synthetic detergents, to be given at Rutgers University, on July 6 to 11.

Meat packers may also be interested in a feature appearing in the April issue of the *Journal of the American Oil Chemists' Society*. This is the first part of the annual review of literature on fats, oils and soaps. It was prepared by M. M. Piskur, Swift & Company.

Enforcement Chief Quits

Edward P. Morgan, OPS enforcement chief, has resigned to return to private law practice.

SAVE A PENNY!—LOSE A DOLLAR?

All over the country there are literally thousands of materials handling equipment buyers who are doing just that! Those immediate 'penny-savings' keep them up on top for awhile, but when time runs its race these buyers find they're high and dry... Those pennies they saved turn into dollars lost... lost due to excessive maintenance costs.

Smart, "pound-wise" buyers are setting new records in reduced maintenance costs with Aerol's quality-plus equipment. Positive pressure sealed hubs prevent foreign matter from attacking and destroying vital bearings. Timken tapered roller bearings guarantee greater rollability... and Aerol's 'lubricated for life' wheel frees maintenance men for other important tasks.

An advertisement for Aerol wheels. It features a large, detailed illustration of a wheel assembly, including the hub and spokes. Below the illustration, the text reads 'CONCENTRATE ON aerol'. At the bottom, it says 'AEROL CO., INC. 2424 San Fernando Road • Los Angeles 65, Calif.' and 'NO WHEEL ROLLS LIKE AN AEROL'. There is also a small logo consisting of a stylized letter 'A' inside a circle.

here's why it pays to specify
KOLD-HOLD
 TRUCK REFRIGERATION

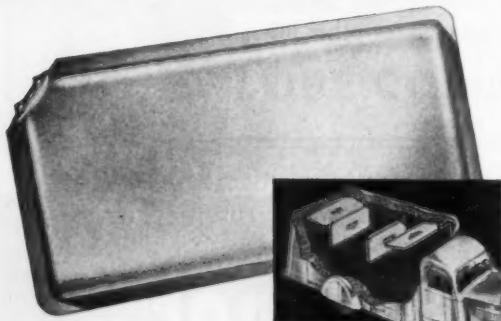

It pays to specify KOLD-HOLD truck refrigeration because you save money when you do. You save, first, because Kold-Hold Refrigeration costs less to use.

Kold-Hold "Hold-Over" Plates maintain predetermined temperatures throughout the longest day's hauls for as little as 10 cents . . . less than the cost of either wet or dry ice. You save too in loading and unloading time. The "Hold-Over" truck plates can be connected into your plant cooling system at the end of the day to make your truck a "cooler room on wheels." Undelivered loads can be left in the truck for the next day's deliveries.

It pays to specify KOLD-HOLD Truck Refrigeration Plates because of their complete dependability. With over one-half million plates in use today, no case of operational failure has ever been reported. They often outlast several truck bodies and are guaranteed for ten years to be free from defects in workmanship and materials.

It pays to specify KOLD-HOLD Truck Refrigeration Plates because they help keep truck bodies clean, sweet, dry and odorless to eliminate losses from spoilage. They take a minimum of space in the truck, permitting longer, more profitable runs because of adequate refrigeration.

It pays to specify KOLD-HOLD Refrigeration Plates.

Faster Bagger

The Anderson Bagger, Model 134, handles 101 products, quickly, easily, economically. The machine is simple, low in cost, and highly efficient.

Quick adjustments for height and tilting forward or backward enables the operator to set machine at the most advantageous position. He can fill a bag and place it in a carton in one operation. The stainless steel bag trough, capacity 200 bags, may be loaded from front or back. Simple adjustments for bag sizes. Blower, equipped with air filter, opens bag and keeps it free from foreign matter. Protective plastic cover can be supplied, if desired, for use when machine is not in operation.

It will pay you to investigate this speedy, low-cost machine.

Insurance Spending

(Continued from page 15)

construction costs is often the same man who continues to insure his motor vehicles year after year for the amount of their purchase price. Regardless of insured value, you will find that the insurance company is legally obligated to pay only the actual or depreciated value at the time of loss. Insured values should be watched at each renewal date to keep the coverage in line with current replacement costs.

Engineering Services: Many companies writing coverage for meat packing plants are equipped to supply engineering service. It will pay packers to take full advantage of these services. By proper use firms can gain extra skilled employees without having to increase the payroll.

Discounts: Many types of policies allow discounts for special conditions, and it would behoove any businessman to sit down with his insurance agent or broker and go over the discounts applicable to his business. Many times, a very little expenditure will more than pay for itself in premium savings. For example, the installation of the proper type of fire extinguishers will reduce a fire rate in some cases.

Not all of these points would apply to any one particular business, but they may serve as a guide in reducing the cost of insurance programs. As a final point in reducing insurance cost, it is recommended that a survey of coverage be made at least every three years by a qualified agent or broker not presently writing the business. Without competition, the tendency in any business is to "leave well enough alone," and the stimulation of competition over a packer's line cannot help but benefit him twofold:

1. It may bring to his attention new and broader coverages.
2. It may show that he is paying too much for insurance.

Liver Has Ability to Store Vitamin B₁₂: AMIF

A research investigation of the ability of the liver to store vitamin B₁₂ has been conducted by the American Meat Institute Foundation. In this experiment, diets containing varying amounts of the vitamin were fed to comparable colonies of white rats. Test animals were also fed diets containing fresh beef round, pork ham, lamb leg, kidney, liver and injectable liver extract. This permitted cross checking on the efficiency of utilization of vitamin B₁₂ as supplied by meat samples containing known amounts of the vitamin.

The results disclosed that the vitamin B₁₂ potency of the livers increased as the level fed was increased, indicating that the livers of the test animals did possess the ability to store the vitamin. There were several other sidelights of the study which gave valuable information on the data on the vitamin B₁₂ content of meat and meat products.

Renderers Discuss Anthrax, Sewage Problems at Regional Meeting

DANGER and extent of the anthrax outbreak in Ohio and neighboring states have been greatly exaggerated by the press and radio, according to Dr. H. G. Geyer, Ohio state veterinarian, who spoke this week at a special meeting of the fourth area of the National Renderers Association held in Columbus, Ohio. The problem of meeting more stringent stream pollution requirements was also discussed by the group.

The state veterinarian said that the livestock producing and processing industries, including renderers, packers and feed manufacturers, have suffered from the hysteria about anthrax. He noted that one danger lies in the fact that producers are being discouraged or prevented from using animal protein feeding materials which their livestock need for health and growth. He emphasized that overly stringent control measures may be more harmful to the livestock industry than the disease, and that Ohio authorities have tried to minimize interference with the normal flow of feed material, but have shut off the importation of foreign raw bone meal.

The numbers of counties, farms and livestock affected are not large enough to cause undue alarm, but Ohio is determined to stamp out the disease.

Dr. Geyer described symptoms of the disease and cleanup measures for affected plants and discussed the processing times and temperatures required for killing the anthrax organism in its vegetative and spore forms. He said that current experiments and past work indicated that the vegetative form succumbed to heat below 160°F., and that the spores could be killed by relatively short period moist heating at 212° and by more protracted dry heating at 270 to 275°. He stated the belief that reprocessing material for 180 minutes with 60 lbs. internal pressure and 60 lbs. in the jacket would be a safe procedure.

Dr. Geyer praised the rendering industry and meat packers for the cooperative spirit they have shown in meeting the emergency and said that Inland Products, Inc., Columbus, has been especially helpful to the authorities.

A representative of the Ohio public health service discussed anthrax from the public health standpoint. He stated that the rate of attack is low in relation to the humans exposed to the disease; that some individuals are scarcely affected and that the fatality rate from all types has been reduced sharply by use of penicillin and other antibiotics.

The renderer's sewage treatment problem was discussed at length by R. L. McTavish of the Germantown Rendering Co. He pointed out that while Ohio processors are now acutely aware of the problem because they must obtain permits to discharge waste into a stream, and face the necessity of in-

stalling treatment facilities to insure continuation of their permits, renderers and packers throughout the Ohio River valley (and elsewhere) will be under increasing pressure of the same type in years to come.

McTavish then analyzed the sources of rendering plant sewage. The principal volume of waste water originates with the condensers; next comes wash-up, then the facilities for truck and barrel washing, and finally the plant's sanitary sewage. The total amount of waste runs from 1500 to 2000 gallons for each 1,000 lbs. of raw material processed; thus a plant having about 10 tons per day would have about 40,000 gals. of sewage.

Barometric or jet condensers not only pick up heat (as do shell and tube), but also contaminants in the form of soluble gases and distillates from the rendering cookers. Waste water from the condensers is not as high in BOD as some other types, but has the following characteristics:

BOD, 110 ppm.; suspended solids, 1,700 ppm., and grease (as ether-free extract), 900 ppm. These figures do not include boilover from the cookers.

The volume of washdown water is relatively small, amounting to only about 2 per cent of all water used, but such waste is over 50 times more contaminated than condenser water. It has the following characteristics: BOD, 5500 ppm.; suspended solids, 1600 ppm., and grease, 9000 ppm.

In connection with barrel and truck washing, McTavish pointed out that detergents tend to form emulsions which resist precipitation of solids. Such waste has the following characteristics: BOD, 1300 ppm.; suspended solids, 1500 ppm., and grease, 900 ppm.

McTavish declared that sanitary sewage should go to a septic tank, and that cellulose material, such as paunch manure, should be kept out of the waste system. He told renderers that the cost of even a small treatment plant would be considerable, and cited \$30,000 to \$35,000 as about the minimum for a batch chemical treatment unit; \$40,000 to \$45,000 for continuous chemical, and \$50,000 to \$55,000 for biological treatment. Operating costs would run \$20 per day and up.

Suggestions for easing the problem were also made by McTavish. Sweeping up solids and fats before cleanup will help. The volume of waste water can also be reduced if indirect rather than direct condensation is employed. Water from indirect condensers can be reused after cooling or can be discharged directly into the stream without going through the treatment plant.

A representative of the water pollution board of Ohio explained the state's permit system and the questionnaires which renderers and packers will be asked to fill out.

Polyethylene Supply Still Lags Behind Demand

Despite increased production of polyethylene over the past six months, demand is still far in excess of supply, according to George C. Miller, vice president of Bakelite Co. Current U. S. production of the plastic material is estimated by Miller at 90,000 to 100,000 lbs. annually. Output has been increased some 30 per cent over the level of late 1951 and should rise another 30 per cent by the end of 1952, Miller said.

Commenting on the supply of vinyl resins for the packaging industry, Miller said the outlook was adequate. Vinyl resins have been in sufficient supply for several months.

Federal Bills on Safety

The National Association of Manufacturers has submitted to the Senate committee on labor and public welfare a comprehensive report showing the great improvement which has been made in industrial safety under state regulations and with voluntary industry cooperation.

The document is an argument against bills pending in Congress (S 2325 and S 2714) to create in the Department of Labor a bureau of accident prevention and also to provide assistance to state agencies responsible for safety in industrial plants. It indicates that the number of disabling injuries per million man hours declined from 24.2 in 1926 to 14.7 in 1950.

USDA Sends Man to Canada In Foot-Mouth Fight

Secretary of Agriculture Charles E. Brannan announced this week that the Department's Bureau of Animal Industry has sent a representative, at the request of the Canadian government, to observe and collaborate in the foot-and-mouth disease eradication work in Canada. Dr. Francis J. Mulhern, formerly with the eradication campaign in Mexico, has just arrived in Canada to fill the post. Dr. Mulhern spent nearly five years in Mexico as a district supervisor in the field and as assistant to the co-director of the Joint Mexican-United States Commission for the Eradication of Foot-and-Mouth Disease in the central offices of the Commission in Mexico City.

In the meantime, the Bureau has strengthened enforcement of inspection and quarantine regulations at the Canadian border. From Lake Superior to the Puget Sound roving border patrol activities are under the direction of four Inspectors in Charge at Olympia, Wash.; Helena, Mont.; Bismarck, N.D., and St. Paul, Minn. Within this entire western region, five area supervisors are now responsible for the work of 24 new quarantine enforcement inspectors now being employed.

Great Lakes shipping traffic is just beginning the heavy spring and summer seasons, and inspection activities for the area are being organized under the supervision of offices at Chicago, Ill.; Lansing, Mich., and Buffalo, N.Y. Six quarantine enforcement inspectors will presently patrol the area.

...when we added ZEST!"

—Says Leading National Packer

The simple addition of wonder-working ZEST—Staley's Monosodium Glutamate—brought about a substantial increase in pork sausage sales for this major national packer. ZEST is doing the same thing for packers all over the country because it magnifies the flavor and taste appeal already present in meats. All meats taste better... sell better when you use ZEST!

ZEST is simple to use. Just add to your cutter with your spice and seasonings—and see the difference in flavor!

Send TODAY for full details about ZEST

Staley's Monosodium Glutamate

A. E. STALEY MFG. CO., Decatur, Ill.

Make this Simple Test

Make up two patties of pork sausage. Add $\frac{1}{4}$ tsp. of ZEST to one patty. Fry both patties as usual. Taste the ordinary patty... then taste the ZEST patty. See for yourself what a world of flavor difference ZEST makes!

Don't just add ZEST to your product—add it to your Sales Story as well! ZEST users had the greatest success with it when they told the trade about it! They did sampling, they let butchers and consumers taste the difference ZEST makes. Then they bought... and kept on buying!

Propose Higher Rental Charges for Freight Cars

Solution of the present railroad freight car shortage lies in higher rental or per diem charges as an incentive for more construction of cars, Eldon Martin, general counsel of the Chicago, Burlington & Quincy Railroad Co., told a Senate committee. He spoke for the Burlington and five other railroads.

California Truck Taxes

A bill designed to provide equitable taxation for truckers from states which do not have reciprocal agreements with California has been introduced in the California state legislature. The present law discourages truckers from other states from hauling into California since they are charged the full truck fee.

Wool Purchases by Army

In an amendment to the pending 1952-53 military appropriation bill, the House stipulated that the Army cannot use its appropriations to buy foreign wool unless it certifies that domestic wool is not available in sufficient quality and proper grades.

Week's Meat Production Declines As Hog Slaughter Falls Seasonally

MEAT production under federal inspection for the week ended April 5 was estimated by the U. S. Department of Agriculture at 312,000,000 lbs. This was 4 per cent below the 325,000,000 lbs. the previous week, but 4 per cent more than the corresponding week

before, and 11,000 more than a year ago. Beef production amounted to 125,600,000 lbs. compared with 121,000,000 lbs. the previous week and 119,000,000 lbs. last year.

The slaughter of 102,000 head of calves showed a 4,000 increase over the

Mar. 29, 1952	1,005	550	170	95	239	134	105	50	14.6	48.1
Apr. 7, 1951	1,006	556	169	96	243	136	107	53	14.2	41.2

of last year. Cattle slaughter continued to provide an increasing portion of the meat supply as hog declined seasonally, now being only slightly above a year ago. Veal production still lags behind last year. Spring lambs, both native and California, made up a moderate share of the sheep and lamb slaughter.

Cattle slaughter numbered 225,000 head for a 5,000 increase over the week

preceding week and compared closely with last year's 106,000 kill. These amounts of calves accounted for 10,000,000, 9,300,000 and 10,200,000 lbs. of inspected veal, respectively, for the three periods compared.

Hog slaughter declined to 1,239,000 head from the previous week's 1,373,000, and held only slightly above the 1,192,000 a year ago. As pork, the week's hog kill made up 165,200,000

FURTHER LOSSES IN CUTTING MARGINS ON HOGS

(Chicago costs and credits, first three days of week.)

Although live hogs averaged higher in price during the week, and some meat cuts rose in price, further irregularities in the general pattern resulted in another loss in values during the week. Only light hogs remained in the plus column.

This test is computed for illustrative purposes only. Each packer should figure his own test using actual costs, credits, yields and realizations. The values reported here are based on the available Chicago market figures for the first three days of the week.

lbs., compared with 183,700,000 lbs. the week before and 162,100,000 lbs. a year ago. Lard output was placed at 43,400,000 lbs. against 48,100,000 and 41,200,000 lbs. for the other two periods under study.

In the sheep and lamb division, the report showed ovine slaughter at 209,000 head compared with 219,000 the week before and 141,000 a year ago. As lamb meat and mutton, the above figures resulted in 10,900,000, 11,000,000 and 7,500,000 lbs. for the three weeks, respectively.

The week's total meat output stood as a record for corresponding periods. Figures showed the 1950 output at 272,000,000 lbs.; 1949, 264,000,000 lbs.; 1948, 164,000,000 lbs.; 1947, 272,000,000 lbs.; and 1946, 263,000,000 lbs.

Americans' Food Buying Power Increasing, Report

Food purchasing power increased more than 17 per cent in the United States since the start of World War II, according to a recent report by the Bureau of Labor Statistics. Food prices did not double while hourly earnings more than doubled before 1949. Food purchasing power increased almost 5 per cent between 1949 and 1950 because food prices dropped nearly 3 per cent and earnings rose about 1½ per cent.

Consumers' purchasing power at the meat counter increased since 1950 because average hourly earnings continued to increase in relation to meat prices. The report indicated further that this increase is measured best in terms of the number of minutes it takes for the average American to earn the price of a given commodity.

For example, the average worker spent 25.4 minutes earning the price of a pound of sliced bacon in June, 1951. Six months later it took him 23.1 minutes. In June, last year it took 25.1 minutes to earn a given unit of ham but in December it required only 23.4 minutes. Pork chops required 29.2 minutes of work in June but 27.4 minutes six months later. The worker's advantage has increased still further since then in relation to meat costs, the report indicated.

A tabulation of the comparative working hours an American must put in to buy certain meats in relation to the average worker in other countries is shown below:

	Ans.	Can.	Ire.	U.S.A.	U.S.S.R.
Pork chops	27.4	29	36	56	90
Bacon	23.1	47	49	86	458
Ham	23.4	—	—	52	73
Lamb, leg	31.7	13	45	71	146
Average beef	31.4	22	44	68	182
Rib roast	32.6	14	42	48	—

The table is for illustrative purposes only and is incomplete as far as other meats are concerned. But it shows that Ivan must work the longest period of time to earn his "meat" than any of the others. Australians seem to have the over-all advantage.

Vacuum

-SECRET OF DOLE SUPERIORITY

The DOLE Vacuum Plate consists of a steel jacket enclosing sinuously formed tubing through which is circulated a refrigerant. The plate is evacuated and the vacuum formed results in outside air pressure of a ton on each square foot on both sides of the plate. This pressure on the plate holds the plate walls firmly against the tubing throughout its entire length and results in maximum heat transfer from walls to tubing and refrigerant.

Be sure you use the best . . . DOLE, the cold plate with the vacuum.

DOC DOLECO Says—25 years of specialization in plate refrigeration have made DOLE the leader, often imitated but never equalled.

W-W TANKAGE and CRACKLING GRINDER

Built for continuous operation at full capacity, heavy-duty W-W Grinders, with Star Cylinders, handle large quantities of bulky or coarse materials easily. Available from 20 to 150 H. P. Rugged, blunt edge surfaced steel hammers last 2 to 5 times longer. Wide feed opening and full throat allow uniform feeding and reduces screen drag, saving horsepower and screen expense. Cool operation eliminates "stickiness" of otherwise heated "gluey" and "greasy" cracklings. Write for catalogue on all W-W Grinders. There's a W-W Grinder for every need.

CORN-HOG RATIO

The Corn-hog ratio for barrows and gilts at Chicago for the week ended April 5, 1952 was 9.1 according to a report by the U. S. Department of Agriculture. This ratio was one-tenth higher than reported for the preceding week, but was just three points under the 12.1 ratio recorded for the same week a year ago. These ratios were recorded on the basis of yellow corn selling for \$1.829 per bu. in the week ended April 5, \$1.851 per bu. in the previous week and \$1.760 per bu. for the corresponding period just a year earlier.

TALLOWS AND GREASES

Thursday, April 10, 1952

The "bearish" talk among the trade several weeks back is proving itself more fact than fancy. At last weekend, movement of product was reported in a scattered way at steady levels, and at the start of the new week the market was extremely quiet, with large soapers and export interests on the sidelines.

However, around midweek one of the large consumers stepped into the market and picked up various grades of tallow and greases at marked down quotes, and in some instances as much as $\frac{1}{2}$ c lower. Several tanks of yellow grease sold at 3 $\frac{1}{2}$ c, and about five tanks of prime tallow at 4 $\frac{1}{4}$ c and 4 $\frac{1}{2}$ c, all c.a.f. Chicago.

A few tanks of B-white grease sold at 3 $\frac{1}{2}$ c, couple tanks of choice white grease at 4 $\frac{1}{4}$ c and 5c, all c.a.f. Chicago. Several tanks of bleachable fancy tallow traded at 4 $\frac{1}{4}$ c, and a few tanks of renderers' choice white grease at 4 $\frac{1}{4}$ c, c.a.f. Chicago. Unconfirmed was the report of prime tallow changing hands at 4 $\frac{1}{2}$ c, Chicago.

Export interest was practically nil later in the week, and large soapers again turned to listing available offerings. Few bids came out. Bleachable fancy tallow was quoted at 4 $\frac{1}{4}$ c and yellow grease at 3 $\frac{1}{2}$ c, Chicago. Scattered movement disclosed special tallow at 4 $\frac{1}{4}$ c, choice white grease at 4 $\frac{1}{4}$ c, No. 2 tallow at 3 $\frac{1}{4}$ c, and house grease at 3 $\frac{1}{2}$ c, all c.a.f. Chicago. Prime tallow, renderers' production, sold at 4 $\frac{1}{2}$ c, and choice white grease, also renderers' production, at 4 $\frac{1}{4}$ c, c.a.f. Chicago.

A few bids were reported on choice white grease at 5 $\frac{1}{2}$ c, East, for "quick shipment," and yellow grease was bid in the Chicago area at 3 $\frac{1}{2}$ c, without trade. On Thursday, the only reported sale was a tank of choice white grease at 4 $\frac{1}{4}$ c, c.a.f. Chicago.

TALLOWS: Thursday's quotations: Fancy tallow, 7 color, 5@5 $\frac{1}{2}$ c; bleachable fancy tallow, 4 $\frac{1}{2}$ @5c; prime tallow, 4 $\frac{1}{2}$ @4 $\frac{1}{4}$ c; special tallow, 4 $\frac{1}{4}$ c; No. 1 tallow, 3 $\frac{1}{2}$ c, and No. 2 tallow, 3 $\frac{1}{4}$ c, all nominal.

GREASES: Thursday's quotations: Choice white grease, 4 $\frac{1}{4}$ @4 $\frac{1}{4}$ c; A-white grease, 4 $\frac{1}{4}$ c; B-white grease, 3 $\frac{1}{2}$ c; yellow grease, 3 $\frac{1}{2}$ c; house grease, 3 $\frac{1}{2}$ c, and brown grease, 2 $\frac{1}{2}$ @3c, all nominal.

VEGETABLE OILS

Wednesday, April 9, 1952

Prices fluctuated in a weak-toned vegetable oil market this week, and business was generally on the quiet side.

Most selections suffered price declines of $\frac{1}{2}$ c to $\frac{1}{4}$ c early in the week. Soybean oil, April and May shipment, traded early at 9 $\frac{1}{2}$ c. Later, however, April movement declined $\frac{1}{4}$ c and sold at 9 $\frac{1}{4}$ c. There was scattered trading of July-September shipments at 9 $\frac{1}{2}$ c. Tuesday, September shipment traded at 9 $\frac{1}{4}$ c and was offered later at 9 $\frac{1}{2}$ c.

The cottonseed oil market was steady, but trading was light. Valley oil sold at 10 $\frac{1}{2}$ c and was offered in the Southeast at that price. Cottonseed oil traded in Texas at 10 $\frac{1}{4}$ c. Lack of business volume was largely attributed to the fact that crushers were expecting higher government support prices for cottonseed and, therefore, were withholding offerings. Corn oil sold at 11 $\frac{1}{2}$ c and peanut oil cashed at 12 $\frac{1}{2}$ c. The coconut oil market was slightly firmer with offerings listed at 7 $\frac{1}{2}$ c.

Crushers continued to withhold material at midweek, consequently, a dull situation prevailed. There was scattered trading of soybean oil at 9 $\frac{1}{2}$ c, for resale and original material. Offerings later were priced up to 9 $\frac{1}{2}$ c. July shipment sold early at 9 $\frac{1}{2}$ c and later trades were heard at 9 $\frac{1}{2}$ c. Late sales of September shipment were at 9 $\frac{1}{2}$ c.

The cottonseed oil market gained strength, but again, trading was limited. Offerings were listed early at 10 $\frac{1}{2}$ c in the Valley and might possibly have traded at that figure. Later, offerings were priced up to 11c in the Valley and Southeast, but no action at that level was reported. Texas oil traded at 10 $\frac{1}{2}$ c, in a small way, but later 10 $\frac{1}{4}$ c was the asking price.

A light trade of corn oil was heard at 11 $\frac{1}{2}$ c and bids at 12 $\frac{1}{2}$ c for peanut oil were indicated. Coconut oil traded

SHORTENING SHIPMENTS

Standard shortening shipments for the first quarter of this year amounted to 60,850,000 lbs., according to the Institute of Shortening and Edible oils. This was a sharp rise compared with the 49,942,000 lbs. over the corresponding period last year. The 1950 figure was 78,317,000 lbs. and the 1949 figure, 63,191,000 lbs.

U.S. Wool Production Last Year Shows Gain Over 1950

Total wool production in the United States in 1951, shorn and pulled, amounted to 250,445,000 lbs., according to the Bureau of Agricultural Economics. Slightly more than the 1950 output, this was the first year since 1942 that wool production has increased over the previous year. The amount of pulled wool, however, was less than in 1950. Total production in 1950 was 247,822,000 lbs. Of the 1951 output 225,545,000 lbs. was shorn and 24,900,000 lbs. pulled. For the previous year these figures were 215,422,000 and 32,400,000 lbs., respectively.

The average price received by growers for shorn wool last year was 99.5c per lb., an all-time record. This was compared with 57.3c per lb. in 1950 and the 10-year average of 41.2c.

The number of sheep and lambs shorn in 1951 was estimated at 27,857,000 head, or slightly under 1,000,000 more than a year before. The average fleece weight was 8.24 lbs. in 1951, for a new record.

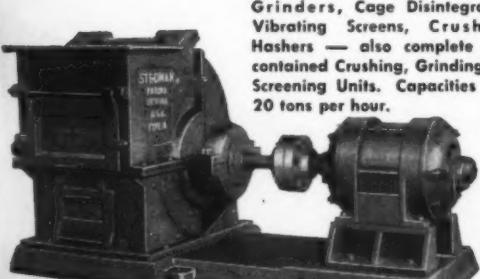

The biggest wool-producing state was Wyoming with 19,642,000 lbs. California ranked second with 15,589,000 lbs. and Utah third with 12,019,000 lbs.

HIDES AND SKINS

Big packer hide market active with sales at 1@1½c price declines—Small packer and country hides slow with only light trading reported—Calfskins and kipskins weak with prices hard to define—Activity completely lacking in sheepskin market.

CHICAGO

PACKER HIDES: The sharply lower prices for spot hides and reports of heavy inventories of hides in packer establishments cast a depressing picture in the hide market at the start of the week. The shoe and leather industry added a further note of gloom indicating retail shoe sales to be the smallest in years at a time when Easter buying should be at its peak.

The big packer market was extremely quiet early Monday, but late in the day action picked up considerably and about 45,000 hides sold. About 5,100 Chicago light cows sold at 14c and 1,000 Omaha light cows traded at 14½c. There was also movement of 7,400 northern branded cows at 12c. A lot of 2,300 heavy native steers, River, brought 10c and Chicago heavy cows sold at 13c. The volume of business continued good Tuesday with about 20,000 butt branded steers, Texas and Colorados, trading at 9c and 8c, respectively. River heavy native steers traded at 10c and River light cows sold at 14½c.

Although a spurt of activity was evidenced early in the week, the amount of buying did little as to influencing the volume of trading Wednesday. St. Paul light native cows sold at 14½c and 3,000 St. Paul heavy native steers traded at 10½c. A total of 2,600 native heavy steers sold at 10c and 10½c, Chicago and the River. About 2,300 butt branded steers traded at 9c, and a trade at 8½c was also reported. About 2,400 St. Paul heavy native cows sold at 13c. There was a trade of 2,200 Cedar Rapids Kosher heavy native steers at 9½c, Chicago basis. A

sale of northern branded cows, 2,800, brought 12c.

On Thursday, 10,000 heavy native steers sold at 10c, and 2,500 heavy native steers, Sioux Falls, traded at 10½c. About 1,200 branded cows brought 12c. A lot of 5,000 heavy native cows moved at 12c and 12½c, Chicago and the River. Wichita light native cows sold at 14½c.

SMALL PACKER AND COUNTRY HIDES: Definite trading was hard to establish and quotations were mostly unchanged from a week ago. At mid-week, however, there was light trading reported at slightly lower prices following the big packer price declines.

Cooler Space Decline Less Than Expected in February

Utilization of public cooler space declined during February but the decline was not as great as expected. By the end of February public cooler occupancy was 57 per cent compared with 59 per cent on January 31, the Production and Marketing Administration has announced. This two-point decline was only half the average decrease for this time of the year.

Freezer occupancy at 81 per cent by the end of February was the same as on January 31, and compared with 70 per cent on the same date last year. Ordinarily a decrease in freezer use is expected during February and there has been only one other instance on record when such a change did not materialize—February, 1944.

A 16 per cent net decrease in cooler weights and a 1 per cent decrease in freezer weights brought national totals down to 1,600,000,000 and 2,300,000,000 lbs., respectively, by February 29. During February a net decrease in cooler weights of 308,000,000 lbs. was reported of which cured beef made up a considerable part.

The freezer weight decrease of 29,000,000 lbs. was the smallest net reduction ever reported during February, according to the PMA report. Increases in stocks of frozen eggs and meats almost countered the net withdrawals of frozen fruits, vegetables, dairy, and poultry products.

Addition of Nitrogen to Fertilizer Yields More Corn

An increase in the proportion of nitrogen to phosphate in fertilizers applied to corn, plus a side dressing of ammonium sulfate (straight nitrogen fertilizer), can lead to a significant increase in yield per acre of corn, according to a statement prepared by the department of agriculture.

Increases in yield have been estimated at around 15 per cent over the added expenditure. Yield responses, it was said, varied with soil and growing conditions. Supplies of nitrogen for fertilizer will be about 7 per cent more this year, but may not meet demand.

WEEK'S CLOSING MARKETS

Last Quarter Cuban Fats Imports Up 18 Per Cent

Cuban imports of lard and rendered pork fat during the last quarter of 1951 totaled 37,220,000 lbs., or about 18 per cent more than during the previous quarter, the American Embassy in that country has reported. This brought the year's total to a record 144,000,000 lbs. In 1949 and 1950, imports totaled 125,000,000 and 140,000,000 lbs., respectively.

Stocks on hand, according to the report, amounted to about 17,000,000 lbs. Consumption for this year is expected to exceed 12,000,000 lbs. per month for the first quarter. Therefore, imports of lard and rendered pork fat during the quarter will probably amount to at least 35,000,000 lbs., if normal stocks are maintained.

Fourth quarter imports of inedible tallow and greases dropped to 4,700,00 lbs. from the 9,800,000-lb. average during the three previous quarters. Large inventories and increased domestic production accounted for the quarterly decrease. Total arrivals in 1951 reached 34,300,000 lbs. compared with 32,000,000 lbs. in 1950.

Meat, An Aid To Health

Nutrition Foundation, which publishes Nutrition Reviews, places animal proteins high on its list of foods as "One of the most important means of avoiding fatty livers and a great number of related injuries to health." In this connection, the foundation points out further that "it is not enough to survive into the years from 60 to 80, but that these should be years of health and enjoyment, and mental vigor."

CHICAGO PROV. SHIPMENTS

Provision shipments, by rail, in the week ended April 5, with comparisons:

	Week Apr. 5	Previous Week	Cor. Week 1951
Cured meats, pounds	22,306,000	20,241,000	12,877,000
Fresh meats, pounds	29,406,000	22,983,000	19,431,000
Lard, pounds	3,347,000	4,622,000	5,939,000

FRIDAY'S CLOSINGS Provisions

The live hog top at Chicago was \$17.50; average, \$16.50; Provision prices were quoted as follows: Under 12 pork loins, 39; 10/14 green skinned hams, 43 1/2@44; Boston butts, 36; 16/down pork shoulders, 31; 3/down spareribs, 37; 8/12 fat backs, 8@9; regular pork trimmings, 16; 18/20 DS bellies, 17 1/2@18 nominal; 4/6 green picnics, 26@26 1/2; 8/up green picnics, 25@25 1/2. Weekly Review

February Cattle Dress Heavier Than Year Earlier

The average live weights of the 985,000 cattle 343,000 calves, 5,779,000 hogs and 990,000 sheep and lambs slaughtered during the month of February, 1952, with comparative figures for February, 1951, were reported by the U. S. Department of Agriculture as shown in the following table:

	February	1952	1951
Cattle	1,013.0	1,017.1	
Steers*	1,029.9	1,018.7	
Heifers*	877.3	859.6	
Cows*	1,032.0	1,047.9	
Calves	191.1	175.9	
Hogs	245.1	245.1	
Sheep and lambs	104.2	103.4	

*Also included with cattle.

Packers operating under federal inspection paid the following average prices per cwt. for livestock during the periods under comparison:

	February	1952	1951
Cattle	\$28.51	\$29.91	
Steers*	30.84	33.42	
Heifers*	28.04	31.28	
Cows*	20.71	23.56	
Calves	31.15	33.00	
Hogs	17.14	21.93	
Sheep and lambs	26.83	34.90	

*Also included with cattle.

The dressing yields of the livestock slaughtered (per 100 lbs. live weight) are shown below:

	February	1952	1951
Cattle	56.0	54.6	
Calves	57.3	56.6	
Hogs*	75.9	75.8	
Sheep and lambs	47.7	47.5	
Lard per 100 lbs.	15.6	14.4	
Lard per animal	38.3	35.3	

*Subtract 7.0 to obtain reported packer style average.

The average dressed weights of federally inspected livestock slaughtered were reported as follows:

	February	1952	1951
Cattle	567.3	555.3	
Calves	109.5	99.6	
Hogs	186.0	185.8	
Sheep and lambs	49.7	49.1	

Calif. Tops In Feb. Cattle, Sheep Kill; Iowa In Hogs

California lead all states in the number of cattle and sheep slaughtered during the month of February, according to figures released by the U. S. Department of Agriculture. That state accounted for a cattle slaughter of 146,000 animals. Illinois was second with 124,000 and Iowa third with 110,000 head. Wyoming was last with 700.

Wisconsin lead in the calf department with 97,000, followed by New York's 71,000 and Pennsylvania came third with 52,000 calves slaughtered under federal inspection. Wyoming came last with 100.

Iowa's 1,134,000 hogs slaughtered topped all states. Illinois ranked second with 718,000 and Minnesota third with 531,000. Nevada's 1,600 hog kill stood last.

California accounted for a sheep slaughter of 128,000 animals compared with 120,000 in Iowa and 113,000 in Nebraska. Wyoming and Louisiana each showed 100.

Early Iowa Pig Crop Down

Preliminary estimates of sow farrowings on Iowa farms during the three months, December through February, by the Iowa Crop Reporting Service were 154,000 head. This indicated a 25 per cent reduction from the same period a year earlier, but was considered 59 per cent greater than the 1941-50 average. December-February farrowings normally represent less than 10 per cent of the Iowa spring pig crop.

BUFFALO LIVESTOCK

Receipts at Buffalo, N. Y., in March, 1952 were reported by the U. S. Department of Agriculture:

	Cattle	Calves	Hogs	Sheep
Receipts	12,671	4,762	22,814	23,075
Shipments	6,400	380	16,412	19,407
Local slaughter	6,265	4,382	6,402	3,668

Canadian Cattle Slaughter Down, Hogs Up In February

Inspected slaughter of cattle in Canada during February declined to 71,552 animals from 77,887 reported by the Department of Agriculture in that country. A decline also was noted in calf slaughter, which numbered 22,966 head compared with 25,883 last year.

Hog slaughter of 499,758 head showed a substantial increase over last year's 339,615-head kill. Sheep and lamb slaughter of 21,024 was a decided increase over the 15,978 killed during February, 1951.

The dressed weight of the cattle kill amounted to 36,585,258 lbs. against 39,634,283 lbs. a year ago. In February dressed weight of calves totaled 2,891,961 lbs. compared with 3,336,302 lbs. in 1951. Dressed pork weight was 80,832,269 lbs. against 54,200,232 lbs. a year ago, and lamb and mutton compared at 992,614 and 802,787 lbs. for the two months.

KINDS OF LIVESTOCK KILLED

The classification of livestock slaughtered under federal inspection during February, 1952 compared with January, 1952, and February, 1951 is shown in following table:

	Feb. 1952	Jan. 1952	Feb. 1951
	Per cent	Per cent	Per cent
Cattle—			
Steers	59.5	54.7	53.4
Heifers	12.4	11.9	13.0
Cows and heifers	38.0	42.4	43.4
Bulls and stags	2.5	2.9	3.0
Total	100.0	100.0	100.0
Canneries and cutters	11.9	14.5	11.4
Hogs—			
Sows	10.4	7.1	5.1

While every precaution is taken to insure accuracy, we cannot guarantee against the possibility of a change or omission in this index.

The firms listed here are in partnership with you. The products and equipment they manufacture and the services they render are designed to help you do your work more efficiently, more economically and to help you make better products which you can merchandise more profitably. Their advertisements offer opportunities to you which you should not overlook.

BACON EQUIPMENT WITH AN ENVIALE REPUTATION

WIDTH GAUGE

Manually controlled setting predetermines width of slab.

DROP FRONT

Chamber front drops from sight facilitating loading and unloading.

SAFETY LEVERS

Operator's both hands on levers start and complete pressing cycle.

ANCO HYDRAULIC BACON PRESS

The SIMPLICITY and MECHANICAL PERFECTION of ANCO BACON FORMING PRESSES have brought complete satisfaction to hundreds of users throughout the United States.

They perfectly square and uniformly size ragged distorted bellies of all sizes, either skinned or unskinned at a rate of up to 9 slabs per minute.

ANCO BACON SLICER and CONVEYOR

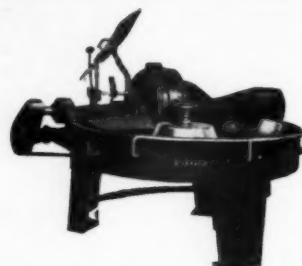

It slices from 650 to 800 slices per minute or 3000 pounds per hour on heaviest bellies at 9 slices per inch. Maximum width 12 inches—maximum opening from gripper to blade, 30 inches.

Scaling — wrapping tables are made in various sizes to meet product requirements.

THE ALBRIGHT-NELL CO.
5323 S. WESTERN BLVD., CHICAGO 9, ILLINOIS

ANCO ENGINEERS ARE READY TO HELP YOU MODERNIZE YOUR BACON PACKING DEPARTMENT

**INVITATION
TO EFFICIENCY
at every step in
sausage making**

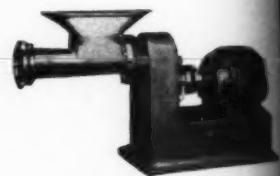

SILENT CUTTERS — Capacities from 20 to 800 pounds. Special analysis steel blades give clean, cool cutting action. Has self-emptying time-saver feature.

STUFFERS — Capacities from 60 to 1,000 pounds. Special leak-proof design . . . air meat can't get past piston. Stainless valves and tubes.

VACUUM MIXERS — Capacities (also standard models) from 75 to 2,000 pounds. Stainless paddles, shafts, tubs and end plates optional.

GRINDERS — Capacities from 1,000 to 15,000 pounds per hour. Machined feed screw and finely finished rifled cylinder assure clean, cool cutting.

ACCURATE

HEAT REGULATOR

Unsurpassed for reliability and power to operate large or small diaphragm valves for accurate temperature control of Water Heaters, Heat Exchangers, Jacket Water for Compressors, Diesel and Gas Engines, and many industrial processes.

IMPORTANT FEATURES

- Adjustable Sensitivity and over-heat protection.
- Calibrated Dial temperature adjustment.
- Ranges 50 to 250° F. and 150 to 350° F.
- Simple, Rugged Construction withstands vibration and insures many years of reliable service. Requires 15 lb. supply of compressed air or water for its operation.
- Small Size — regulator head is only 2 1/4" x 3 1/8". Write for Bulletin 316.

While every precaution is taken to insure accuracy, we cannot guarantee against the possibility of a change or omission in this index.

The firms listed here are in partnership with you. The products and equipment they manufacture and the services they render are designed to help you do your work more efficiently, more economically and to help you make better products which you can merchandise more profitably. Their advertisements offer opportunities to you which you should not overlook.

BACON EQUIPMENT WITH AN ENVIALE REPUTATION

ANCO BACON SLICER and CONVEYOR

It slices from 650 to 800 slices per minute or 3000 pounds per hour on heaviest bellies at 9 slices per inch. Maximum width 12 inches—maximum opening from gripper to blade, 30 inches.

Scaling—wrapping tables are made in various sizes to meet product requirements.

ANCO HYDRAULIC BACON PRESS

The SIMPLICITY and MECHANICAL PERFECTION of ANCO BACON FORMING PRESSES have brought complete satisfaction to hundreds of users throughout the United States.

They perfectly square and uniformly size ragged distorted bellies of all sizes, either skinned or unskinned at a rate of up to 9 slabs per minute.

WIDTH GAUGE

Manually controlled setting predetermines width of slab.

DROP FRONT

Chamber front drops from sight facilitating loading and unloading.

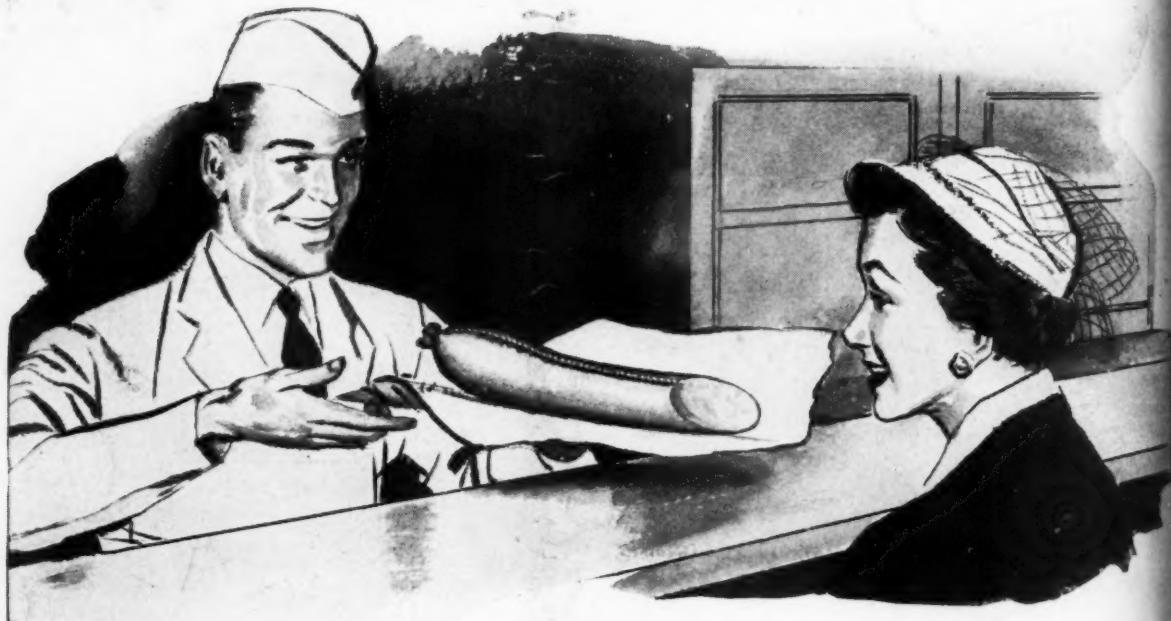

SAFETY LEVERS

Operator's both hands on levers start and complete pressing cycle.

ANCO ENGINEERS ARE READY TO HELP YOU MODERNIZE YOUR BACON PACKING DEPARTMENT

Your sausage displays better...sells faster... in SWIFT'S selected NATURAL CASINGS

SWIFT'S BEEF ROUNDS—Economical casings of fine quality. Processed and calibrated to bring you faster stuffing and more uniform results. For your best sausage grades of Ring Bologna, Kielbasa, Liver Sausage, etc.

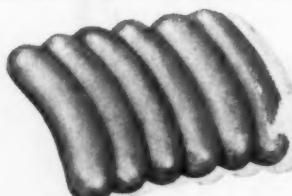

SWIFT'S BEEF BUNG CAPS—Closely fatted to improve finished appearance. Swift processes them as quickly as possible for freshness and perfect color. For Cooked Salami, Bologna, Veal Sausage, Capicoli, Minced Specialty, etc.

Here, for example, is Liver Sausage displayed at its very finest—in a Swift selected Sewed Pork Bung. See the "quality look" that it gives your product. It's naturally appealing because it's packed in a Swift Natural Casing. And this is true of any sausage product you make.

Just as important to you is the assured perfection of Swift's Natural Casings. All are carefully inspected under pressure for flaws. All are precision-measured and graded.

Without a doubt, you get the greatest yield of finished product for your casing dollar with Swift's selected Natural Casings. Place a sample order with your Swift salesman today or contact your nearest Swift Branch Office.

SWIFT & COMPANY

SWIFT'S PORK CASINGS—Ideal for large Frankfurts, Polish Sausage, Peperoni and Smoked Country Sausage because they permit maximum, even smoke penetration throughout. They're of dependable, uniform quality—always!

SWIFT'S BEEF BLADDERS—Perfect in every way for perfect sausage operations. Processed, selected and graded to give your product that quality look. For Minced Specialties and Luncheon Meats—round, flat and square styles.

There's a Swift Selected Natural Casing to Meet Your Every Requirement.
